Attn: Ms. Viqui Gayer

Dear Viqui:

I assume that Tom shared with you more than forty email that summarizes the situation of the contamination of Guam's environment, including the 20 most deadly (natural and men-made) compounds. The information includes more than 100 dumpsites with T.Chemicals (TC) in a 39x8 miles island, the presence and concentrations of the TC's in the Food that we eat, the Air that we breathe, and the Food that we eat. I also informed the community about the presence of the TC's in the Blood & Organs of the Chamorros & Guamanians, and their association with dramatic epidemics in the population of Cancer (up to 2000% higher than in mainland), Diabetes, Renal Failure, etc.

As you can see Guam has many problems, but the widespread contamination of our water/air/food, is not a problem...is what it is in any part of the World: "A Medical

Emergency".

I did not quit when I was under cross-fire in Bosnia, I did not quit after I was taken hostage when working with the World health Organization/ United Nations by guerillas in Latin America, and I won't quit trying to protect the lives of the Children of Guam (for moral & professional reasons, but mainly because my faith in Good).

When, has mandated by law, I begun to inform the community, the acting President of UOG, **Ms. Helen Wippy**, the Vice President, **Jeff Barcinas**, and the Dean, **Lee Yudin**, locked me out of my office, cut the A/C, the drinking water, send me tons of disciplinary Memos, constant Death Threats, etc. However, I did not quit.

The situation at the present is that the UOG officials mentioned above, have vetoed the extension of my contract at UOG, and sent me a letter of termination that can take effect any moment.

All the best,

Dr. Szyfres

PS/as, you know, I am not a Chamorro or Guamanians and have no family or any type of emotional/historical ties with Guam, but for me, human life has nothing to do with place of residence, race, gender, or nationality. I informed the office of the Governor of Guam, all 15 members of the Legislature, the AG, and the Congresswoman... they could not care less

---- *BUT* ----

I also informed the community through the Newspapers, the Radio Stations, email, TV, Meetings...THE MAJORITY COULDN'T CARE LESS, A FEW TOLD ME THAT I KEEP FIGHTING--- AND--- TO TAKE CARE OF MY "HEALTH" BECAUSE THE ISSUE COULD IRRITATE THE INTERESTS OF THOSE WITH MONEY & MEMBERS OF THE GOVERNMENT. THEY STRONGLY ENCOURAGE ME TO KEEP FIGHTING, BUT TOLD ME THAT IT COULD BE DETRIMENTAL FOR THE JOBS TO BE TALK OR BE SEEN WITH ME ("FIGHT FOR ME...DIE FOR ME")..... SO INSTEAD OF A PERSON THAT INFORMS ABOUT A THREAT TO THE HEALTH OF THE COMMUNITY, (A TYPHOON, AN EPIDEMIC, ETC), I WAS LEFT ALONE UNDER FIRE BY THE SAME PEOPLE THAT I AM TRYING TO PROTECT.

As you may know, I have been for more than 2 years with constant death threats, so.... why to bother in helping people that don't want to be helped... because the adults can decide that they prefer to maintain their government salaries and benefits, at the cost of going through prolonged agonies hooked to hemodyalisis machines, be wasted with chemotherapy, etc, IT'S THEIR CHOISE..... but is not the decision of the "Children of

Guam"...THEY CAN NOT CHOOSE.

Subject: Tell me what they did wrong on Guam so we can try to stop it

Hello, I'm an environmentally concerned friend of Tom Barcinas's who gave me your email address. The Dept head of Guam Agriculture has decided that regardless of our concerns he is going to let some of his people, a certain Diana Vice, proceed to introduce our flightless non swimming ckoko or Guam rail to the sand bar, a flood zone, known as Cocos Island. First they are going to use large quantities of diphoncine and brodacoam with a warning not to eat crabs for a few months. Of course people will eat them anyway.

Anyway, they will kill 80% of monitor lizards that have made the small sandbar their home to prepare for this flightless rail release

I may have gotten some of the information wrong, but I heard something like you knew people were messing with our environment and ended up getting canned or quitting or something like that.

What do you know that needs to be known and what needs to be stopped that is being done that you know about?

Viqui Gaqyer, writer and environmentalist
